Subject: Chemicals for carcinogen identification

Dear Ms. Oshita,

Thank you for the opportunity to comment on the upcoming Prop 65. It has come to my attention that flouride is present on the list. I wish to encourage the inclusion of this dangerous chemical to that list of

KNOWN carcinogens. As one dentist put it, "If you have to call poison control after ingesting one pea-sized amount of toothpaste because of the flouride, why is the same amount in this one cup of water I am now drinking?"

If our nation is to truly change, as our president has asserted, then we must cease in making policies regarding our health based on studies or the benefits of drug companies.

Thank you for your time,

Lily Yazdi, CHT
